

# Alzheimer's disease now 100 years old

October 30 2006

---

Many of the world's Alzheimer's disease experts will be in Cleveland next week to observe the 100th anniversary of the first Alzheimer's disease diagnosis.

Approximately 350 scientists from Australia, Canada, China, Britain, Japan, Mexico and the United States are to attend a conference Nov. 6-7 sponsored by Case Western Reserve University to discuss advances in technology, environmental design, ethics and care in dealing with the disease that affects 18 million people worldwide.

There are 4.5 million U.S. citizens with the disease and that number is expected to double by 2025.

"As we mark the 100th anniversary of Alzheimer's, it is time to think broadly and reflect deeply on the meaning of Alzheimer's for individuals and society," said Dr. Peter Whitehouse, professor of neurology at the university's Center for Memory and Aging.

Speakers at the "Reflecting on 100 Years of Alzheimer's: The Global Impact on Quality of Lives" conference will discuss the challenges created by Alzheimer's disease and related conditions in the areas of psychiatry, neurology, geriatrics, psychology, nursing and social work.
