

# Australian population growth fastest for 50 years: data

September 22 2009

---

Pedestrians cross a busy intersection in central Sydney on September 18, 2009. Australia's population will explode by almost two-thirds in the next 40 years to 35 million, posing an economic threat to the nation that is as serious as climate change, the government warned on September 18.

Australia's population grew at its fastest rate in 50 years in the 12 months to March thanks to a surge in migrant numbers, official figures showed Tuesday.

The [population](#) grew by almost half a million people, or just over two percent, to 21.8 million, with almost 300,000 immigrants, the Australian Bureau of Statistics (ABS) said.

"The last time Australia saw higher growth rates was in the 1950s and 1960s as a result of post-war [migration](#) and high birth rates," the ABS

said.

The growth rate had almost doubled in five years, it added.

Treasurer Wayne Swan last week released population projections showing the number of Australians would grow by almost two-thirds to 35 million by 2049, posing an economic threat as serious as climate change.

Conservationists said the figures showed Australia's population was "on a collision course with our natural environment" and called for migration to be cut to more sustainable levels.

"Each additional one million people adds 25 million tonnes of pollution to [Australia](#)'s greenhouse accounts," said Charles Berger from the Australian Conservation Foundation.

"We need a long-term population policy aimed at stabilising our population and consumption at sustainable levels and helping other countries to do the same."

But Immigration Minister Chris Evans said temporary skilled migrant numbers were already in decline, following cuts to the program in response to the global [economic downturn](#).

"The Australian labour force will start to decline over the coming decade without adequate levels of skilled migration," Evans said.

"A healthy level of skilled migration will offset the impact of our ageing workforce to maximise our productivity levels and to support our ageing population," he added.

According to projections, the senior population is set to double and the

number of elderly people will expand four-and-a-half-fold.

The ratio of retirees to working-age Australians is expected to drop to 1:2.7, from 1:5 currently.
