

UK coroner says tumor likely killed girl

October 1 2009

(AP) -- A British coroner says a girl [who died after receiving a vaccine](#) against cervical cancer was likely killed by a tumor.

Natalie Morton collapsed Monday about two hours after being given Cervarix, a vaccine which protects against two viruses that can cause cervical cancer.

Deputy coroner Louise Hunt said Thursday at an inquest into the teenager's death "it appears that Natalie died from a [tumor](#) in her chest involving her heart and her lungs."

Her mother and stepfather say that Natalie was "kind, fun-loving and had a beautiful smile. We will miss her very much."

Britain's National Health Service began offering the [Cervarix vaccine](#) to teenage girls last year. More than 1.4 million doses of the [vaccine](#) have been given out so far.
