

Life expectancy has improved with childhood type 1 diabetes

August 10 2012

For children diagnosed with type 1 diabetes, life expectancy has increased, with about a 15-year improvement seen from a 1950-1964 subcohort to a 1965-1980 subcohort, according to a study published online July 30 in *Diabetes*.

(HealthDay) -- For children diagnosed with type 1 diabetes, life expectancy has increased, with about a 15-year improvement seen from a 1950-1964 subcohort to a 1965-1980 subcohort, according to a study published online July 30 in *Diabetes*.

Rachel G. Miller, from the University of Pittsburgh, and colleagues compared life expectancy of two subcohorts from the Pittsburgh Epidemiology of [Diabetes Complications](#) (EDC) study of childhood-onset (aged
