Taiwan heightened surveillance of travelers from China on Thursday after authorities confirmed the island's first case of a new deadly strain

of bird flu.

The 53-year-old man became ill with fever after returning from a visit to the eastern Chinese province of Jiangsu on April 9, the Centers for Disease Control said.

He twice tested negative for H7N9 but eventually tested positive Wednesday after his condition deteriorated, [CDC](#) official Chang Feng-yi said.

China and Taiwan have close trade and economic ties. An estimated 1 million Taiwanese live on the mainland. Many Taiwanese laptop and other electronics makers have operations in Jiangsu province, where the first case of H7N9 was confirmed March 31.

Some 6,000 Chinese tourists visit Taiwan every day.
