

Top 100 EHR systems sorted by company revenue

October 31 2013

(HealthDay)—The top 100 electronic health record (EHR) systems have been sorted, mainly by company revenue, in an article published Oct. 25 in *Medical Economics*.

Noting that the future viability of EHR systems is becoming increasingly important to physicians, Daniel R. Verdon discusses the financial health of companies operating in the EHR sector. Using [survey data](#), interviews with company officials, web searches, annual report reviews, and press releases, the financial health of companies was assessed and the top 100 companies were listed, based on company revenue.

The author notes that obtaining basic financial information about the companies was difficult, and sometimes impossible; considerable

challenges were encountered to understand the system's functionality, capabilities, and platforms. Although some companies believe in the product and services they are marketing and make information easily available for physicians to evaluate, many companies make it difficult for [physicians](#) to evaluate their products and services.

"If you find yourself shopping for an EHR system for the first time, or because you are filing for an EHR divorce, be sure to ask about the financial health of the operation, number of other providers in the system, and how the system will handle Meaningful Use 2 requirements if not already certified," Verdon writes.
