

Calming ingredients help consumers to relax

December 13 2013

In today's fast-paced society consumers are looking for many different ways to de-stress, relax and slow down. In the December issue of *Food Technology* magazine published by the Institute of Food Technologists (IFT), Contributing Editor Linda Milo Ohr writes about several ingredients and beverages that may have a calming effect when consumed.

Some popular [ingredients](#) currently being used in products to promote relaxation or reduce stress include botanicals such as chamomile, passionflower, and valerian. Most people are familiar with chamomile in tea form as a mild sedative and muscle relaxant. Another less well-known botanical, gotu kola, has been known to enhance cognitive function including memory and alertness and reduce [mood disorders](#). Passionflower is a sedative, and valerian is a muscle relaxant.

Several companies are creating ingredients from these botanicals to meet the consumer demand for products that promote relaxation. One company has created an ingredient for [beverages](#) from a plant extract derived from lemon balm leaves of the species *Melissa officinalis* L. that acts simultaneously on stress and its associated symptoms like sleep disorders thanks to its specific composition. Another company created a pure form of the amino acid L-theanine to be added to beverages shown in a study (Yoto et al. 2012) to reduce anxiety, and keep blood pressure down in adults.
