

Coping tips for winter skin

December 1 2013

Moisturize, cleanse (but don't overdo), expert says.

(HealthDay)—The cold, dry air of winter can deplete your skin of moisture and cause "winter itch."

But you can take steps to protect your <u>skin</u> and prevent that itchy feeling, according to Dr. Robyn Gmyrek, a dermatologist and director of the Skin and Laser Center at NewYork-Presbyterian/Columbia University Medical Center.

Moisturize daily with petrolatum- or cream-based moisturizers, Gmyrek said. Apply them directly to your wet skin after a bath or shower so that the moisturizer can help trap surface moisture. For <u>sensitive skin</u>, choose a moisturizer without fragrance or lanolin.

Clean your skin, but don't overdo. Too much cleansing depletes the skin's natural moisturizers, Gmyrek explained. Washing your face,

hands, feet and between the folds of your skin once a day is enough. You can rinse your trunk, arms and legs daily, but you don't have to use soap or cleanser on these areas every day.

Limit your use of hot water and soap. If you do have winter itch, take short, lukewarm showers or baths with a cleanser that is non-irritating and non-detergent-based. Apply a thick cream or a petroleum-jelly-type moisturizer right away, and then gently pat skin dry, Gmyrek said.

Room humidifiers can help prevent indoor air from becoming too dry, she added. When you're outside, protect your skin from wind, extreme cold and sun. Don't use tanning beds or artificial sunlamps, which can damage your skin and increase your risk of <u>skin cancer</u>.

See a <u>dermatologist</u> if you have persistent dry skin, scaling, itching or skin growths that concern you. This applies throughout the year, not just during winter, Gmyrek said.
