

MERS death toll in Saudi reaches 111 (Update)

May 3 2014

Saudi health authorities announced Saturday two new deaths from the MERS coronavirus, raising to 111 the number of fatalities since the disease appeared in the kingdom in September 2012.

A 25-year-old man has died in the Red Sea port city of Jeddah and a woman of 69, who suffered from tuberculosis and anaemia, died in Mecca, also in western Saudi Arabia, the health ministry said.

It later said the death toll has now climbed to 111, revising its earlier figure of 109 deaths.

At the same time, 35 new cases of the severe respiratory disease have been recorded, raising the number infected in Saudi Arabia over the past two years to 396, the world's highest tally.

American health officials on Friday said the first case of MERS has been confirmed in the United States.

The person infected with Middle East Respiratory Syndrome Coronavirus (MERS-CoV) is a health care provider who had travelled to Riyadh for work, they said.

Last week, Egypt recorded its first infection after a person who arrived from Saudi Arabia tested positive.

Public concern in Saudi Arabia over the spread of MERS has mounted

after the resignation of at least four doctors at Jeddah's King Fahd Hospital who refused to treat patients for fear of infection.

MERS is considered a deadlier but less-transmissible cousin of the SARS virus that erupted in Asia in 2003 and infected 8,273 people, nine percent of whom died.

There are no vaccines or antiviral treatments for MERS, a disease with a mortality rate of more than 40 percent that experts are still struggling to understand.

Some research has suggested that camels are a likely source of the virus.
