Speaking on the Ebola virus, Fauci said it's perfectly normal to feel anxious about a disease that kills so fast and is ravaging parts of West Africa, but predicts there won't be an outbreak in the U.S. (AP Photo/CBS News, Chris Usher)

Top government health officials say they are opposed to placing a ban on travelers from Ebola-infected countries, warning that shutting down

borders could impede efforts by aid workers to stop the spread of the deadly virus.

The idea of a ban gained currency this past week after the nation's first case was diagnosed in Dallas. Proponents have argued that it would help ensure [public safety](#).

Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, part of the National Institutes of Health, said Sunday that a travel embargo on West African countries that are struggling with Ebola would make it much harder for them to control the virus.

"You isolate them, you can cause unrest in the country," Fauci told "Fox News Sunday." "It's conceivable that governments could fall if you just isolate them completely."

British Airways and some other airlines have suspended flights from those countries, and overall traffic to and from the affected areas has dropped.

Republican Sen. Mark Kirk has said the federal government should gradually halt flights to the region to protect Americans. Rep. Tim Murphy plans to conduct hearings on the policy this coming week. He leads the House Energy and Commerce Subcommittee on Oversight and Investigations.

Asking travelers to report their own activities at airports "has been a demonstrated failure, and it is nearly impossible to retrace steps to try and track down everyone who has been in contact with a carrier taking multiple international flights across the globe," Murphy, a Pennsylvania Republican, said Friday.

Centers for Disease Control and Prevention director Dr. Tom Frieden speaks at a news conference Sunday Oct. 5, 2014 at the CDC in Atlanta. Frieden said that he was aware that Ebola patient Thomas Eric Duncan's health had "taken a turn for the worse," but he declined to say what signs of poor health Duncan had shown. Louisiana Gov. Bobby Jindal has said the U.S. should halt flights from Ebola-stricken countries.

Tom Frieden, director of the federal Centers for Disease Control and Prevention, said on ABC's "This Week" that the administration was open to practical suggestions that won't backfire.

"We don't want to do something that inadvertently increases our risk by making it harder to stop the outbreak there, because if it spreads more widely throughout different countries in Africa, that will be even more

of a risk to us," said Frieden, whose agency has cautioned against non-essential travel to Liberia, Sierra Leone and Guinea.

Frieden has also noted that a ban on incoming flights could affect Americans trying to return home from those countries.

An airline passenger traveling from Liberia to Dallas brought Ebola into the U.S. last month. He is hospitalized in isolation, and public-health officials are monitoring a few dozen people who may have been exposed to the virus.

U.S. officials have emphasized that the United States has a modern medical system that is far better equipped to contain an outbreak than the African countries where Ebola is currently spreading.

Airline passengers have their temperatures taken as they board planes in the outbreak zone, although those infected with Ebola can go up to 21 days before they exhibit symptoms. Passengers are also asked about contact with infected people, but that process would not be useful if a passenger lies or simply does not realize the medical condition of people they have encountered.
