In this photo taken Wednesday, Oct. 29, 2014, aid is offloaded to be used in the fight of the Ebola virus, as it arrives by air from America at the airport in Conakry, Guinea. No African countries are on the United Nations list of contributors to fight the Ebola epidemic, and angry legislators from Sierra Leone and Liberia got up to protest at a session on peace and security at the Pan-African Parliament in South Africa last "They said as far as they are concerned, nobody wants to talk about Ebola," said Jeggan Grey-Johnson, a governance expert. Remembering those who have died in the world's deadliest Ebola outbreak, Liberia's president opened one of the country's largest Ebola treatment centers in Monrovia on Friday amid hopes that the disease is finally on the decline in this West African country.

American and U.N. officials as well as Cuban doctors were among the crowd as President Ellen Johnson Sirleaf opened the treatment center, which is set up to hold 200 patients and can eventually treat as many as 300. With the opening of the center, an Ebola treatment unit at JFK Medical Center has been closed. Many people with other diseases had been nervous about going to the nation's largest referral hospital, and officials hope they will now come back.

The opening of the center, built out of white plastic sheeting with USAID written across it, comes as fewer people are showing up for treatment at various centers. Officials are not sure how to interpret that. Some believe it's a sign that the Ebola outbreak is finally on the wane in Liberia.

"It is heartening to see that we are finally perhaps catching up with that boulder if not in front of it. It was rolling down the hill at a speed that we were never going to catch, we thought, two months ago, but we're starting to make progress," said U.S. Ambassador Deborah Malac.

Others believe Sirleaf's order that the bodies of Ebola victims in the capital be cremated has led to people with symptoms hiding at home, because cremation violates traditions.

Doctors Without Borders, known as MSF, said that as of Tuesday there were around 80 patients in its 250-bed facility.

The head of Africa's continental body did not get to an Ebola-hit country until last week - months after alarm bells first rang and nearly 5,000 deaths later. (AP Photo/Youssouf Bah)

"MSF teams are looking into the reasons for this; a widespread aversion to the government's mandatory cremation policy, poor ambulance and referral systems, changes in behavior, and other factors may play a role," the aid group said.

Assistant Health Minister Tolbert Nyenswah, who heads the government's Ebola response, told The Associated Press the JFK Ebola medical team and a team of Cuban doctors will be in charge of the new center, located in Congo Town in eastern Monrovia.

The World Health Organization said this week that the rate of infection

in Liberia appears to be falling but warned that the response effort must be kept up or the trend could be reversed.

The international community's response was late and figures were mostly wrong, Peter Maurer, president of the International Committee of the Red Cross, told reporters in Addis Ababa, Ethiopia. He said he is concerned about the "huge discrepancy" between announcements and the situation on the ground in the Ebola-affected countries.

More than 13,700 people have been sickened by the disease, and nearly 5,000 have died. The outbreak has hit Liberia, Sierra Leone and Guinea hardest and all three countries have resorted to extraordinary measures to combat it.

Sierra Leone has had a state of emergency in place for three months that bans public gatherings and, at one point, the entire country was locked down for three days to seek out hidden cases. There have been rumors that the emergency measures would be lifted, but Attorney General and Justice Minister Franklyn Bai Kargbo told AP on Friday that they are still in force. By law, they can last for 12 months and parliament put no time limit on them, he said.

Relatives react as the lifeless body of their family member is carried away by health workers, after he died suspecting he contracted the Ebola virus, on the outskirts of Monrovia, Liberia, Friday, Oct. 31, 2014. While the disease is beginning to let up in some of Sierra Leone's eastern districts, infections are continuing in the capital and surrounding areas.

Despite some signs of hope in Liberia, many officials warn that the fight cannot be let up. Sirleaf said the memory of sick and dying people with no place to go is still too fresh.

"We can all imagine those early days when journalists .. went into the streets and into the communities and took those pictures that were put on all the television screens all over the world of the dying, the sick, the

dead who could not be picked up on time," she said.

Health workers cover the body of a man suspected of dying from the Ebola virus on the outskirts of Monrovia, Liberia, Friday, Oct. 31, 2014. Despite those dark days, Liberia health workers fought on, she said

"To our health workers," she said, "we owe you a lot for the courage you continue to bring forth."
