(HealthDay)—Higher glycemic variability in the hypoglycemic domain is associated with premature ejaculation (PE) in young males with type 1 diabetes (T1DM), although prevalence of PE is similar for young males with and without T1DM, according to a study published online Nov. 26 in the *Journal of Sexual Medicine*.

Giuseppe Bellastella, M.D., Ph.D., from the Second University of Naples in Italy, and [colleagues](#) examined the prevalence of PE in type 1 diabetes. Data were collected from 100 [male patients](#) with type 1 diabetes (age,
