

# Spring allergies coming into bloom

March 16 2015

---

Expert offers tips to minimize discomfort.

(HealthDay)—With winter loosening its icy grip on most of the United States, it's time to think about spring allergies, a doctor says.

Allergies to spring pollens cause sneezing, stuffy and [runny nose](#), and watery eyes. Other symptoms include itchy nose, mouth, throat, eyes and ears, said Dr. Luz Fonacier, head of allergy and training at Winthrop University Hospital in Mineola, N.Y.

At least three-quarters of asthma patients have allergies, "and these allergic responses in the lung can lead to coughing, wheezing and shortness of breath," Fonacier added.

It's important to know the things that trigger your allergies so that you can take steps to avoid them, she pointed out in a hospital news release.

Monitor pollen and mold counts, and stay inside during mid-day and

afternoon hours when [pollen counts](#) are highest. Take a shower, wash your hair and change your clothes after being outdoors, she suggested.

During allergy season, keep windows and doors shut at home and use air conditioning, which dries the air. You also should keep your car windows up during [allergy season](#), Fonacier said.

If you have severe [allergy symptoms](#), wear a mask when doing outdoor tasks such as mowing the lawn. Consult an allergist about the best type of mask. She advises against mowing the lawn or raking leaves, if possible, because these activities stir up pollen and molds. Also, don't hang sheets or clothes outside to dry.

Take [allergy medications](#) before symptoms begin and use them as prescribed. If you don't already receive them, consider allergy shots, Fonacier said.

Some people move to other parts of the country in an attempt to reduce their allergy symptoms. However, many types of pollen and molds are common in most regions, so moving is probably not the answer, she explained.
