

What to do with kidneys from older deceased donors?

March 26 2015

A new study highlights the best way to use kidneys from older deceased donors, providing the most benefits to patients and addressing the worsening organ shortage. The study's findings, which appear in an upcoming issue of the *Journal of the American Society of Nephrology* (JASN), could lead to changes in current transplant allocation policies.

The number of patients waiting for a [kidney transplant](#) in the United States recently eclipsed 100,000, yet most kidneys recovered from deceased donors aged 65 years or older are discarded.

To investigate how to optimally increase the use of such "expanded criteria donor kidneys," a team led by John Gill MD, MS, Caren Rose, PhD, (University of British Columbia, in Canada), and Elke Schaeffner, MD (Charité University Medicine, in Berlin) conducted a series of analyses of data from the Eurotransplant Senior Program and the United States Renal Data System. They found that in patients in need of a transplant who are at least 60 years old, rapid transplantation from an older deceased donor is superior to delayed transplantation from a younger donor. The researchers also discovered that kidneys from older donors do not have sufficient longevity to provide younger patients with a lifetime of [kidney function](#), but they do have sufficient longevity to provide older patients who have a shorter life expectancy with a lifetime of kidney function.

"Older patients derive a survival benefit from rapid transplantation with an older [donor kidney](#), while younger patients do not derive a benefit

from transplantation from an older kidney," said Dr. Gill. "Ensuring [older patients](#) can access older donor kidneys should be a priority in the United States. This may involve increased utilization of older donor kidneys or possibly excluding younger patients from receiving these kidneys."

More information: The article, entitled "A Lifetime of Allograft Function with Kidneys from Older Donors," will appear online at jasn.asnjournals.org/ on March 26, 2015.
