

Researchers develop palliative care app to help GPs

June 2 2015

The palliAGED app is available on iTunes, the Windows Phone Store and Google Play.

A new, free smartphone app is giving GPs access to specialist medical advice to care for older palliative patients at home or in residential care across Australia.

The Decision Assist Program app, called palliAGED, helps GPs to plan and provide [palliative care](#) by informing clinical processes and

prescribing support for common symptoms that patients experience in the terminal phase.

The app, which was launched last week (and [featured on ABC News on Sunday evening](#)), was designed and developed following a review of available digital resources for palliative and aged care, which revealed limited existing tools to support GPs in providing care to patients nearing the end of their life.

Chief Investigator of the Decision Assist Program, Associate Professor of Palliative and Supportive Services at Flinders University, Jennifer Tieman, said the app brings together a unique set of resources and information accessible to GPs across Australia, including those in rural and remote areas.

"The Decision Assist Program has highlighted the importance of ensuring our health professionals are well trained and have access to specialist medical advice in the area of palliative care," said Associate Professor Tieman.

"The app is just one of a suite of free resources for GPs on palliative care and [advance care planning](#) that have developed by Decision Assist," she said.

Assistant Director of Metro South Palliative Care Service, Dr Greg Parker, said the new smartphone app provided many benefits for doctors.

"GPs who are called upon to treat elderly patients in a [residential care](#) or at home setting may have limited experience providing palliative care," Dr Parker said.

"The app provides information that will help them manage and care for

their [patients](#) in the final stages of their life," he said.

The palliAGED [app](#) can be downloaded at the following stores:

- [Google Play](#)
- [Windows phone store](#)
- [Apple iTunes](#)
