

The ingenuity of refugees is celebrated

July 20 2015

The Refugee Studies Centre has based the report on research conducted in Jordan, South Africa, Uganda, Kenya, and the United States into how refugees are engaged in creative problem-solving and entrepreneurship.

In the Za'atari refugee camp in Jordan, home to 83,000 Syrian refugees, refugees are reconfiguring the structure and lay-out of the camp and their homes in order to replicate their communities before the war broke out. They are living in 'donated' caravans, but the wooden flooring is inappropriate for them because of their regional custom of washing floors with water, which causes the wood to swell and degrade. However, they have reused the wood panelling to fashion into babies' cribs, seating, tables, even a mobile bike stall and shop signs.

In Johannesburg, South Africa, Zimbabwean refugees are starting schools for refugees that are producing extraordinary results in high school exams.

In Nairobi's Eastleigh area, alongside refugee entrepreneurship, a film company has emerged which challenges stereotypes about Somalis.

The report uses the concept of 'bottom-up innovation' to highlight the various ways in which refugees, displaced persons, and others in crisis situations are tackling the most challenging of environments as individuals. People are drawing on their own resources in order to adapt to difficult and different circumstances.

The report suggests that rather than relying upon aid hand-outs, refugees might be better assisted if their own creative solutions were supported and nurtured. This would enable refugees, giving them better access to the internet, microfinance, education, entrepreneurship training, and basic infrastructure.

Professor Alexander Betts, Director of the Refugee Studies Centre at the

University of Oxford and a co-author, said: 'There has been an emerging trend in the humanitarian sector towards using the language of innovation. Generally, though, it has focused on how to improve organisational responses. This is important but these 'top-down' approaches sometimes risk marginalizing the creativity and 'bottom-up' innovation of crisis affected communities themselves.

'In this report, we have tried to showcase examples of how refugees and displaced people innovate in their daily lives. Through examples from Uganda, Kenya, Jordan, South Africa and the United States, we highlight the ways in which [refugees](#) turn often constraints into opportunities for themselves and others. This, we suggest, has major implications for how we think about humanitarian assistance.'
