

Improved care transitions needed post ambulatory surgery

July 28 2015

(HealthDay)—Patients age 70 or older are at greater risk of unanticipated hospital admission within 30 days of ambulatory surgery, even after adjusting for comorbidities, according to a study published online July 22 in the *Journal of the American Geriatrics Society*.

Gildasio S. De Oliveira Jr., M.D., from the Northwestern University Feinberg School of Medicine in Chicago, and [colleagues](#) analyzed data from the 2012 National Surgical Quality Improvement Project to assess the impact of age on unanticipated hospital admission within 30 days of ambulatory surgery.

The researchers found that there were 1,370 [hospital admissions](#) (2.5 percent) among the 53,667 ambulatory surgical cases evaluated. Age (
