Stepping into the furor over eye-popping price spikes for old generic

medicines, a maker of compounded drugs will begin selling \$1 doses of Daraprim, whose price recently was jacked up to \$750 per pill by Turing Pharmaceuticals.

San Diego-based Imprimis Pharmaceuticals Inc., which mixes approved [drug](#) ingredients to fill individual patient prescriptions, said Thursday it will supply capsules containing Daraprim's active ingredients, pyrimethamine and leucovorin, for \$99 for a 100-capsule bottle, via its site: [www.imprimiscares.com](http://www.imprimiscares.com).

The 3 1/2-year-old drug compounding firm also plans to start making inexpensive versions of other generic drugs whose [prices](#) have skyrocketed, Chief Executive Mark Baum told The Associated Press.

"We are looking at all of these cases where the sole-source generic companies are jacking the price way up," Baum said in an interview. "There'll be many more of these" compounded drugs coming in the near future.

The high price of prescription medicines in the U.S.—from drugs for cancer and rare diseases that cost hundreds of thousands of dollars a year down to once-cheap generic drugs now costing many times their old price—has become a hot issue in the 2016 presidential race.

News that Turing, Valeant Pharmaceuticals International Inc. and other drugmakers have bought rights to old, cheap medicines that are the only treatment for serious diseases and then hiked prices severalfold has angered patients. It's triggered government investigations, politicians' proposals to fight "price gouging," heavy media scrutiny and a big slump in biotech stock prices.

At the eye of the storm is former hedge fund manager Martin Shkreli, head of Turing Pharmaceuticals, scorned last month for buying rights to

and then increasing by more than 5,000 percent the price of Daraprim, a 62-year old drug with no competition. The startup drugmaker paid Impax Laboratories \$55 million in August for rights to Daraprim, which treats a rare parasitic infection called toxoplasmosis that mainly strikes pregnant women, cancer patients and AIDS patients.

Imprimis, which primarily makes compounded drugs to treat cataracts and urological conditions, will work with health insurers and prescription benefit managers in each state to make its new capsules and other compounded generic medicines widely available, Baum said.

"We're geared up. We're ready to go as soon as the orders come in," he said.

Compounded drugs are typically made to fill a doctor's prescription for an individual patient, sometimes because the mass-produced version is in short supply or completely unavailable and sometimes to allow for customized formulations or dosages. Compounders don't need Food and Drug Administration approval to do that, unlike drugmakers making huge batches of drugs on complex production lines.

Baum said Imprimis will produce its pyrimethamine/leucovorin capsules, using bulk ingredients from manufacturing plants approved by the FDA, at its own facilities in Allen, Texas; Folcroft, Pennsylvania; Irvine, California, and Randolph, New Jersey.

Turing's Shkreli, under fire from all sides, said late last month that he would lower the price of Daraprim, but hasn't so far. A Turing spokesman didn't respond to a request for comment Thursday but recently noted the company is capping patient copayments at \$10.
