

Many parents unaware of plans for emergencies at preschools and child care centers

October 19 2015

Parents of children ages 0-5 were asked about awareness of emergency plans for child's preschool or child care center. Credit: University of Michigan's C.S. Mott Children's Hospital National Poll on Children's Health

If your child's preschool or child care were affected by a tornado, fire or violent situation, would you know the center's emergency plan to keep the children as safe as possible?

For some [parents](#), the answer may be no, according to a report today from University of Michigan's C.S. Mott Children's Hospital National Poll on Children's Health.

In a recent poll, 39 percent of parents of children ages 0-5 say their child's preschool or child care center has been affected recently by an [emergency](#) situation due to severe weather, a power outage, an evacuation or violent situation. However, only 37 percent are aware of an emergency plan for their center that is available online and just 39 percent say their center has a method of identifying children if an evacuation became necessary.

"Young children can be especially vulnerable during emergencies like a hurricane or violent community situation," says lead researcher Andrew Hashikawa, M.D., M.S., an emergency physician at U-M's C.S. Mott Children's Hospital.

"Our poll raises serious questions about how informed parents are about the plans preschools and [child care centers](#) have in place to respond to emergencies. Many centers may be well prepared to handle these types of events, but emergency plans are much less likely to work if parents don't know about them."

Parents report that the following emergencies have affected their children's preschool or child care center over the past two years:

- 23 percent had a significant power outage
- 23 percent experienced [severe weather](#) (tornado, blizzard, or hurricane)

- 8 percent had an evacuation for fire, flood, chemical, or gas leak
- 8 percent experienced a lock-down for a violent situation at the center or in the community

Other findings parents report about emergency preparedness at their child's preschool or child care center:

- 65 percent say their center stores emergency contact information and health information digitally, to permit easy retrieval in case of evacuation
- 65 percent are aware of a plan for rapid communication of an emergency evacuation (text, email or cell phone)
- 63 percent say their center has a process to confirm the identity of adults at pick up time if evacuation became necessary.
- 40 percent report their child's center has enough car seats or vehicles if [evacuation](#) became necessary

"As we have seen with natural disasters like Hurricane Katrina, emergency plans created to protect young children are critical. Any gaps in communication about these plans between parents and child care providers are concerning," says Hashikawa.

"The American Academy of Pediatrics strongly encourages all parents to learn what plans their child's preschool or [child care](#) center has in place in case of an emergency and where to find this information. We want to ensure that parents and centers are on the same page when it comes to responding to unexpected events and that [children](#) may be safely reunited with parents as soon as possible."
