

# Normal coronary angiogram at 65 predicts survival

November 10 2015

---

(HealthDay)—Patients with normal or near-normal coronary angiogram (CA) results at age 65 years or older have significantly longer survival than the general population, according to a study published in the Nov. 15 issue of *The American Journal of Cardiology*.

Abel E. Moreyra, M.D., from Rutgers Robert Wood Johnson Medical School in New Brunswick, N.J., and colleagues identified 160 patients with normal CA (NORM group) and 111 patients with
