

Winship multiple myeloma study in *The Lancet*

January 6 2016

A landmark Phase II study led by Winship Cancer Institute of Emory University and instrumental in the recent approval of a new multiple myeloma treatment was published online today in *The Lancet*, one of the oldest and most prestigious medical journals in the world.

Winship Chief Medical Officer and multiple myeloma expert Sagar Lonial, MD, was lead author on the paper, "Single-agent Daratumumab in Heavily Pretreated Patients With Multiple Myeloma: An Open-label, International, Multicentre Phase 2 Trial."

Winship played a key role in the testing of daratumumab (trade name Darzalex), which received accelerated approval from the U.S. Food and Drug Administration (FDA) in November 2015.

Daratumumab is now approved for multiple myeloma patients who have received at least three prior treatments. It is the first monoclonal antibody approved for treating multiple myeloma.

Winship was the first center worldwide to open the Phase II trial of daratumumab. Trial results, released earlier this year by Lonial at the 2015 American Society of Clinical Oncology (ASCO) meeting, were pivotal to the FDA's rapid review of this treatment for advanced-stage multiple myeloma.

"The responses we saw in clinical trials that led to rapid approval were striking, especially considering that these patients received a median of
