

## Rate of missed adenomas >5 mm similarly low for BBPS 2, 3

February 12 2016

---

(HealthDay)—The rate of missed adenomas larger than 5 mm is

similarly low for men with Boston Bowel Prep Scale (BBPS) scores of 2 or 3, according to a study published in the February issue of *Gastroenterology*.

Brian T. Clark, M.D., from the Yale School of Medicine in New Haven, Conn., and colleagues collected data from 438 men who underwent screening or surveillance colonoscopies and then repeat colonoscopy examinations within 60 days (1,161 colon segments total). The authors examined the proportion of colon segments with [adenomas](#) larger than 5 mm that were missed in the first examination, suggesting that the miss rate would be noninferior for segments with BBPS scores of 2 versus those with BBPS scores of 3 (noninferiority margin,
