Doctors in Texas will attempt to separate the two 10-month-old sisters born conjoined below the waist. The girls share a colon and bladders that will be reconstructed. Their identical triplet sister, Catalina, was born without serious health issues. (Joshua Thelin/Driscoll Children's Hospital via AP)

Surgery at a South Texas hospital has separated two 10-month-old sisters born conjoined below the waist.

Driscoll Children's Hospital spokesman Jeff Salzgeber says the hourslong operation began Tuesday morning.

Ximena (huh-MEE-nuh) and Scarlett Hernandez-Torres shared a colon and bladders that will be reconstructed. Their identical triplet sister, Catalina, was born without serious [health issues](#).

The [hospital staff](#) has cared for the conjoined girls since they were transferred to the Corpus Christi facility hours after birth.

Dr. Haroon Patel says a team of specialists had been working for months to prepare for the surgery, which lasted about 15 hours.

A hospital statement says doctors have a [positive outlook](#) for the children's recovery. The girls will require additional surgeries as they grow.
