

UN health agency: Measles has killed 35 children in Europe

July 11 2017

The World Health Organization says measles has killed 35 children in Europe in the last year, calling it an "unacceptable tragedy" that deaths are being caused by a vaccine-preventable disease.

The figure is nearly a threefold increase since 2016, when [measles](#) killed 13 children. In 2015, it killed three.

In a statement Tuesday, the U.N. health agency said the most recent [death](#) was a 6-year-old boy in Italy, where there have been more than 3,300 cases and two deaths since last June. The highly contagious virus has also caused 31 deaths in Romania.

Fears about the vaccine's safety have caused thousands of parents to avoid vaccinating their children across Europe. In May, Italy made 12 vaccines mandatory for children, to combat what the government characterized as "misinformation."
