

International variation in prevalence of celiac in T1DM

July 14 2017

(HealthDay)—Celiac disease (CD) is a common comorbidity in young

people with type 1 diabetes, and the prevalence appears to vary internationally, according to a study published online June 29 in *Diabetes Care*.

Maria E. Craig, M.B.B.S., Ph.D., from the Children's Hospital at Westmead in Sydney, and colleagues examined international differences in CD prevalence and characteristics of children with coexisting type 1 diabetes and CD versus type 1 diabetes only. Data were included for 52,721 [young people](#) aged
