

Guidelines can cut nonindicated acid-suppressing Rx in infants

November 22 2017

(HealthDay)—Implementation of a guideline can reduce nonindicated

use of proton pump inhibitors (PPIs) and histamine-2 receptor antagonists (H2RAs) among newborns, according to a study published online Nov. 21 in *Pediatrics*.

Asimenia Angelidou, M.D., Ph.D., from Boston Children's Hospital, and [colleagues](#) developed and implemented a guideline for the use of PPIs and H2RAs in order to reduce nonindicated prescriptions among infants
