

CDC: low birthweight rate increased from 2014 to 2016

March 22 2018

(HealthDay)—From 2014 to 2016 there was an increase in the singleton

low birthweight rate, which was mainly due to increases in the rate of moderately low birthweight, according to a March data brief published by the U.S. Centers for Disease Control and Prevention's National Center for Health Statistics (NCHS).

Lindsay S. Womack, Ph.D., from the NCHS in Hyattsville, Md., and colleagues used data from the National Vital Statistics System to examine singleton low birthweight rates by race and Hispanic origin from 2006 to 2016.

The researchers found that the singleton low birthweight (
