

Screening mammography for women 40-49 detects more cancers compared with older age groups

March 13 2018

When compared to the screening population ages 50 and over, screening mammography in women ages 40-49 detects 19.3% additional cancers at the expense of an overall 1.5% increase in callbacks and 0.1% in increased biopsies, according to a study to be presented at the <u>ARRS</u> 2018 Annual Meeting, set for April 22-27 in Washington, DC.

The study to be presented by Abid Irshad of the Medical University of South Carolina examined the effectiveness of screening mammography between ages 40-49 in comparison to age groups 50-59 and 60-69. More than 41,000 screening mammography exams were examined for callbacks and recall rate, biopsies performed, cancers detected, and sensitivity and specificity of screening mammography.

Overall, 41,028 <u>mammograms</u> were performed with 5,196 callbacks (12.7% recall rate), 1,164 biopsies, and 326 cancers detected. Women ages 40-49 had 8,913 mammograms, 1,518 callbacks (17% recall rate), 306 biopsies, and 52 cancers detected. Women ages 50-59 had 13,288 mammograms, 1,659 callbacks (12.5% recall rate), 371 biopsies, and 103 cancers detected, while women ages 60-69 had 12,119 mammograms, 1,239 callbacks (10.2% recall rate), 302 biopsies and 89 cancers detected. Overall, the women ages 50 and over had a total of 31,385 mammograms, 3,504 callbacks (11.2% recall rate), 836 biopsies, and 270 cancers detected. By adding the women ages 40-49 to the screening population of 50 and over, the overall callback rate increased

1.5%, the **biopsy** rate increased 0.1% and 19.3% more cancers were detected.

The study results showed that there was a higher number of callbacks among women ages 40-49 compared to women ages 50-59 (17% compared with 12.5%) and to women ages 60-69 (17% compared with 10.2%). There was also a lower positive biopsy rate among women ages 40-49 compared with women over 50. The number of cancers detected in <u>women</u> ages 40-49 was not significantly different from <u>women ages</u> 50-59 or 60-69.
