

Metabolic abnormalities seen in testicular cancer survivors

April 4 2018

(HealthDay)—Testicular cancer survivors (TCS) have metabolic

abnormalities characterized by hypertension and increased low-density lipoprotein (LDL) and total cholesterol, according to a study published in the March 1 issue of the *Journal of the National Comprehensive Cancer Network*.

Mohammad Abu Zaid, M.D., from Indiana University in Indianapolis, and colleagues examined clinical and genetic metabolic syndrome (MetS) [risk factors](#) in 486 North American TCS aged
