

# 12 die of cholera in NE Nigeria: official

May 23 2018

---

Twelve people have died of cholera in northeast Nigeria's Adamawa state, the health commissioner said on Wednesday, in the latest outbreak of the disease in the region.

The [outbreak](#) has infected 142 people in Mubi district since Sunday, Ahmad Sajo told AFP.

"We have recorded 12 deaths from (a) [cholera outbreak](#) in Mubi north and Mubi south local government areas in the past four days," he said.

"A total of 142 people were infected and medical teams have been dispatched to the affected communities to contain the rapid spread of the [disease](#)," Sajo said.

He said the medical teams were yet to find out the cause of the outbreak.

Cholera is caused by a bacterium transmitted through contaminated food or drinking water. It causes acute diarrhoea, with children particularly at risk.

Water-borne diseases are a constant threat because of a lack of adequate sanitation as well as stagnant groundwater during the rainy season in Nigeria.

Last month 13 [people](#) were killed in a similar outbreak in nearby Yobe state, which the authorities blamed on contaminated water.
