

# Tasty, healthy alternatives to sandwich bread

May 18 2018, by Len Canter, Healthday Reporter

---

(HealthDay)—Sandwiches make convenient lunches, but those two slices of bread can really eat into your day's calorie allotment. What's more, typical white bread doesn't provide much in the way of nutrients.

If you're trying to cut down on carbs, go gluten-free, or simply reduce your intake of [refined grains](#), try these tasty alternatives. Bonus: You can replace the saved calories with more of the fillings or just bank them for another meal.

Two bread-like options are whole grain (or corn to avoid gluten) pitas and tortillas. Pitas provide a pouch for your fixings, while tortillas let you roll them up into a handy package. They work great with scrambled eggs for breakfast, and even leftovers from a stew dinner. Just be sure to read labels and look for low-fat varieties to get the calorie savings.

Lettuce leaves make a great sandwich wrap with just one or two [calories](#) a piece. Tall varieties like romaine, red leaf and green leaf lettuce are ideal because you can fold in the ends before rolling them up to make a tight pouch.

Some vegetables make perfect "containers" for sandwich fillings. Try scooping the seeds out of a cucumber, zucchini, tomato or bell pepper and stuff with tuna salad.

For a protein boost, use hard-boiled egg white halves. Replace the yolks with cubes of lean meat.

Finally, large, thin slices of turkey, chicken and roast beef can be filled with [lettuce](#) and tomato and wrapped up to go. And to add a taste twist, try hummus or mashed avocado as a substitute for mayo.

**More information:** OneGreenPlanet.org has more ideas for turning [vegetables](#) into sandwiches.
