

CDC: infant mortality rate varies greatly among states

September 13 2018

(HealthDay)—Infant mortality rates in the United States vary

substantially by state, according to a *QuickStats* report published in the Aug. 24 issue of the U.S. Centers for Disease Control and Prevention's *Morbidity and Mortality Weekly Report*.

Danielle M. Ely, Ph.D., from the CDC in Atlanta, and colleagues used 2016 data from the National Vital Statistics System to assess the U.S. infant mortality rate.

The researchers found that the infant mortality rate in the United States was 5.87 infant deaths per 1,000 live births in 2016.

The infant mortality rate ranged from a low of 3.47 in Vermont to a high of 9.03 in Alabama. Two other states had rates below 4: New Hampshire, at 3.67, and Massachusetts, at 3.94.

Southern states generally had higher rates of infant [mortality](#). Two states besides Alabama had [infant mortality rates](#) above 8: Arkansas, at 8.2, and Mississippi, at 8.67.
