

As hurricane florence targets US, experts urge safety

September 11 2018

(HealthDay)—With Hurricane Florence barreling toward the Carolinas,

the National Safety Council offers steps to stay safe.

As mass evacuations begin in coastal North Carolina, and states of [emergency](#) are declared in Virginia and North and South Carolina, the council urges those along the East Coast to monitor the storm's path and heed government warnings.

Florence, which strengthened to a Category 4 hurricane on Monday with sustained winds of 130 miles per hour, is expected to hit the eastern United States later this week, according to *CNN*. Those affected by Tropical Depression Gordon need to be especially concerned about potential flash flooding.

It's vital to take a look at safety procedures you'll need during any severe weather. Families should have emergency plans and a safety kit handy.

In 2017, nearly 60,000 weather events caused almost 600 deaths and more than 4,200 injuries, the council said. Most of the deaths were due to flash floods, tropical storms and heat waves.

The council urges everyone to keep an emergency kit at home and in the car. Kits should have basic needs to sustain a family for at least 72 hours.

Your emergency plan should include several methods of evacuation and identify places to shelter. You should also make emergency contact lists in case families get separated. And learn how your town alerts residents when [severe weather](#) or a natural disaster is near.

Tips for staying safe in hurricanes include:

- Boarding up windows and tying down loose items like patio furniture.
- Establishing a point for family members to meet if separated,

and picking one person everyone can contact.

- Sheltering in sturdy buildings. Avoiding isolated sheds or other small structures, open areas, hilltops, the beach or boats.
- If you are driving in heavy rain, try to exit the road, stay in the car and turn on the emergency flashers.
- Don't drive into flooded areas. If flood waters surround your car, leave the car and go to higher ground.
- Avoid touching electrical equipment, cords, metal and water.
- Listen for sirens, stay away from windows and outside doors, and seek shelter in a bathroom or basement.
- Stay indoors until you're told it's safe to go outside.

Tips for flash floods include:

- Know your distance to rivers, streams and dams.
- In heavy rain, stay away from underpasses, underground parking garages and basements.
- Never walk in water above your ankles—you could be swept off your feet in as little as 6 inches of rushing water.
- Shut off the electricity and other utilities.
