

Strike up the band for better grades

January 16 2019, by Len Canter, Healthday Reporter

(HealthDay)—Not every budding musician will become a rock star, but studying music has brain bonuses for kids, even those who don't take up an instrument until their teen years.

There's no doubt that participation in in-school music programs boosts motivation. Mastering an instrument or performing with a group brings a sense of accomplishment and is a wonderful creative outlet. What's more, it can enhance other types of learning, research has revealed.

Scientists compared the brain gains among high schoolers involved in band classes for two or three hours a week to those participating in a fitness program.

The young musicians showed faster maturation in the brain's response to sound and in sensitivity to sound details. Both are important for [language skills](#) and, in turn, academic success. The students developed what's called learning to learn. (This isn't to say that kids should ignore exercise—fitness has other essential benefits, so it's important to make time in your children's lives for both types of activities.)

Ideally, music instruction would begin in [middle school](#) and continue through [high school](#). One study found that this continued involvement was associated with a high-level of math proficiency in grade 12.

Unfortunately, music programs are often the victim of budget cutbacks. If your child's school doesn't have a music program, consider investing in outside lessons from a local musician or a [music](#) school.

More information: The Nemours Foundation has great ideas on [how to teach kids about music](#) as early as their toddler years.
