

The best exercises for brain health

May 20 2019, by Len Canter, Healthday Reporter

(HealthDay)—There's a lot you can learn from your elders, starting with the results of a multi-year study of exercise and brain health in seniors.

Researchers from Columbia University and the University of Miami compared results of two sets of brain scans and tests measuring memory and thinking skills in 876 seniors. The tests were done five years apart.

The investigators found a greater mental decline for those who reported low-activity exercises, such as light walking and yoga, compared to those with high-activity levels and exercises like running and cardio workouts.

The difference was equal to 10 years of brain aging, and that was after taking into account other factors that can influence brain health, such as [excess weight](#), [high blood pressure](#), smoking and drinking, according to the findings published in the journal *Neurology*.

Researchers are also learning about the brain benefits of cardio exercise from lab studies—those done on animals. One study found that sustained aerobic activity—such as daily jogging for several miles at a moderate pace—can encourage the growth of new [brain](#) cells, even later in life.

Research into which specific cardio activities are best for each of the sexes is ongoing, so there's still more to learn. In the future, the goal is to learn more about how to individualize exercise for [brain health](#).

This isn't to say that other types of exercise aren't important parts of an overall fitness regimen. Strength training helps you stay independent, while yoga, other flexibility exercises and balance work help prevent dangerous falls and keep you limber.

It may be hard to begin an exercise program if you've never been active, but it starts with your mindset: Don't think of [exercise](#) as a necessary evil, but rather as something positive you do for yourself because of all the things it gives back.

More information: The U.S. National Institute on Aging's [Go4Life](#)

program has a wealth of ideas on starting an exercise plan and finding the motivation to stick with it.
