

Utilization and cancer yield of BI-RADS 3 lesions detected on high risk screening breast MRI

May 7 2019

When appropriate, short-interval follow-up magnetic resonance imaging (MRI) can be used to identify early stage breast cancer and avoid unnecessary biopsies, according to a study to be presented at the ARRS 2019 Annual Meeting, set for May 5-10 in Honolulu, HI.

Utilization of MRI for [breast cancer](#) screening continues to increase, as it is the most sensitive modality to detect breast cancer. Yet, much more is known about short-term follow-up of probably benign findings (
