

# Clinical research improves health of UK economy and NHS

October 16 2019

---

The value of clinical research to the NHS, the UK economy and jobs market has been evaluated in a new report, which provides an assessment of the economic impact of the National Institute for Health Research Clinical Research Network's (NIHR CRN) activities to support clinical research in England.

The report, produced by KPMG UK's Economics team and commissioned by the NIHR CRN, covers the financial period 2016/17 to 2018/19 and presents amalgamated three year data alongside figures for each individual financial year (FY). It shows that over this three year period, clinical research supported by the NIHR CRN generated an estimated £8bn of gross value added (GVA) and 47,467 full time equivalent (FTE) jobs for the UK.

Using data from a range of sources, the report also provides an insight into the benefits and income that NHS providers gain through undertaking commercial contract research—studies sponsored by life sciences companies and delivered alongside NHS care. The report provides an analysis of the value of payments to NHS trusts for delivering commercial research studies. It also estimates how much NHS providers save through using medicines provided as part of commercial studies, where the company bears the cost of the medicine, in place of the standard NHS treatment.

Key findings from the report include:

Over the three year period FY 2016/17 to 2018/19:

- The estimated annual economic contribution of NIHR CRN supported studies increased by £0.1 billion (GVA) between 2016/17 and 2018/19 (up from £2.6 billion in FY 2016/17, to £2.7 billion in FY 2018/19) - linked to increased commercial contract research activity supported by the NIHR CRN
- For each patient recruited onto a commercial trial supported by the NIHR CRN, on average NHS providers in England received an estimated £9,200 from life sciences companies, and on average saved an estimated £5,800 per patient (where trial drugs replaced the standard treatment)
- The number of studies and patients recruited onto NIHR CRN supported studies have both increased by approximately 30% in three years (FY 2016/17—FY 2018/19)

For FY 2018/19:

- NIHR CRN supported clinical research activity generated around £2.7 billion of gross value added to the UK economy and an estimated 47,500 FTE jobs
- The total estimated income for the NHS from delivering commercial clinical trials was £355 million, and the total estimated cost saving was £28.6 million (where trial drugs were used in place of standard treatments)

Dr. Jonathan Sheffield OBE, Chief Executive of the NIHR Clinical Research Network said: "The report highlights and evidences the significant contribution that the delivery of clinical research within the UK makes to the health and the wealth of the nation. Put simply, clinical research benefits our economy enormously—it creates jobs, and generates much needed income and savings for NHS Trusts—ultimately helping NHS finances to go further while improving patient care and

services through the development of new drugs and treatments.

"The NIHR CRN plays a crucial role in this through our dedicated research delivery support and expertise, which enables life science companies to run their trials across the NHS in England. It is this unparalleled offer to the pharmaceutical industry which helps to ensure the UK and the NHS remains amongst the very best places in the world to run clinical trials."

Matt Cooper, Business Development and Marketing Director at the NIHR Clinical Research Network said: "The benefits to the UK of a strong and productive NIHR Clinical Research Network, working in partnership with the NHS, are clearly demonstrated in this report. It describes sustained growth in the Clinical Research Network Portfolio of both clinical research and its value to the UK economy - £2.7billion in 2018/19, an increase of £300million from the previous report in 2016.

"This welcome report comes at a critical moment for commercial clinical research in the UK and gives further support to the Life Sciences Industrial Strategy's assertion of the vital importance of clinical research to the UK economy."

The NIHR CRN provides support to enable patients and health care professionals to participate in clinical research studies, both in the NHS and wider health and social care environment. The clinical research infrastructure provided by the NIHR CRN includes the provision of dedicated research support staff throughout the NHS, facilities, equipment and [support services](#) such as pharmacy services. Life science companies fully reimburse the NHS for all research services and support used during the running of their commercial clinical trials and also contribute an element of capacity building funding for the research centres involved.

A significant proportion of [clinical research](#) activity in the UK is supported by the NIHR Clinical Research Network. In the report, KPMG estimates that the NIHR Clinical Research Network supports around 85 per cent of all commercial studies in England that are approved by the Medicines and Healthcare Products Regulatory Agency (MHRA).
