

Enoki mushrooms from Korea linked to deadly U.S. *Listeria* outbreak

March 13 2020

Enoki mushrooms from Korea are the likely cause of a deadly *Listeria*

outbreak in the United States that has sickened 36 people in 17 states, the U.S. Centers for Disease Control and Prevention says.

Illnesses started between Nov. 23, 2016, and Dec. 13, 2019, with 30 hospitalizations reported and four deaths reported in California, Hawaii, and New Jersey.

Six cases involved pregnant women, resulting in the loss of two pregnancies, according to the CDC.

On March 9, 2020, Sun Hong Foods Inc. recalled enoki mushrooms because they may be contaminated with *Listeria monocytogenes* bacteria. Enoki mushrooms are white, with long stems and small caps.
