More than one million cases of the coronavirus have been detected in Europe, just over half the global total, according to a tally compiled by AFP from official sources at 0830 GMT Wednesday.

With at least 1,003,284 cases, including 84,465 deaths, Europe is the worst hit continent. Globally, 1,991,019 COVID-19 infections and 125,955 deaths have been registered.

The tallies, using data collected by AFP from national authorities and information from the World Health Organization (WHO), probably reflect only a fraction of the actual number of infections. Many countries are testing only the most serious cases.
