Artificial intelligence, machine learning, blockchain, and other key digital technology applications will play a vital role addressing the new healthcare challenges triggered by the COVID-19 pandemic, according to a peer-reviewed Special Issue of *OMICS: A Journal of Integrative Biology*. Click here to read the Special Issue free on the OMICS website through June 13, 2020.

"COVID-19 is undoubtedly among the ecological determinants of planetary health," states Vural Özdemir, MD, Ph.D., Editor-in-Chief of OMICS in his editorial. "Digital health is a veritable opportunity for integrative biology and systems medicine to broaden its scope from human biology to ecological determinants of health," he said. "This is very important."

Despite a widespread belief that media coverage of [artificial intelligence](#) tends to be negative, Colin Garvey and Chandler Maskal, Rensselaer Polytechnic Institute (Troy, NY) report that the majority of the news coverage is positive.

More information: Colin Garvey et al. Sentiment Analysis of the News Media on Artificial Intelligence Does Not Support Claims of Negative Bias Against Artificial Intelligence, *OMICS: A Journal of Integrative Biology* (2019). [DOI: 10.1089/omi.2019.0078](https://doi.org/10.1089/omi.2019.0078)
