More than nine million people have now been infected with the coronavirus worldwide, according to an AFP tally drawing on official sources, as of Monday 1520 GMT.

More than half of the 9,000,091 [cases](#) are in Europe and the United States: Europe having recorded 2,537,451 and the United States

2,281,903.

The number of cases worldwide has doubled since May 16 and more than a million new cases have been recorded in the past seven days. The official figures nevertheless reflect only a fraction of the true number, as many countries only test serious cases.
