

Factors linked to severe COVID-19 in children identified

June 29 2020

(HealthDay)—COVID-19 generally causes mild disease in children, with

8 percent of children requiring intensive care unit (ICU) admission, according to a study published online June 25 in *The Lancet Child & Adolescent Health*.

Florian Götzinger, M.D., from the National Reference Center for Childhood Tuberculosis in Vienna, and colleagues conducted a multicenter cohort study involving 582 individuals aged 18 years or younger with confirmed severe acute respiratory syndrome [coronavirus 2](#) (SARS-CoV-2) infection, detected between April 1 and April 24, 2020.

The researchers found that 48 individuals (8 percent) required ICU admission, 25 (4 percent) required [mechanical ventilation](#), 19 (3 percent) required inotropic support, and one (
