The COVID-19 lockdown has had a disproportionate economic impact on Black, Asian and Minority Ethnic (BAME) migrants in the UK, new

research, which also calls for racial justice, reveals today (13 July 2020).

BAME migrants are 3.1 times more likely than white British to lose their jobs during the [pandemic](#), while BAME British are 40% less likely to benefit from employee protection such as furloughing.

As a result, white British in work before the pandemic were 5.7 times more likely to experience furlough than job loss (18.9% vs. 3.3%), the rate was as low as 1.4 times for BAME migrants (16.3% vs. 11.4%).

'Intersecting ethnic and native-[migrant](#) inequalities in the economic impact of the COVID-19 pandemic in the UK' by Dr. Yang Hu, of Lancaster University, is published open access in '*Research on Social Stratification and Mobility*' - an official journal of the International Sociological Association.

The report also highlights:

- While BAME migrants are 35% less likely to reduce their work hours than white British, they are 1.3 times more likely to experience income loss due to COVID-19.
- Compared with white British, BAME migrants are 2.2 times more likely to experience an increase in financial strain, such as keeping up to date with bills (e.g. utility, credit card, etc.), during the COVID-19 lockdown.
- White British (28.8%) are 1.4 times more likely than BAME migrants (20.9%) to report leading a financially comfortable life during the pandemic. In contrast, BAME migrants (11.1%) are 1.5 times more likely than white British (7.2%) to report experiencing financial difficulty during the pandemic.
- BAME migrants (26.6%) are 1.3 times more likely than white British (20.2%) to experience an increase in their perceived level of financial hardship during the lockdown.

Dr. Hu, a Senior Lecturer in Sociology and Data Science, presents nationwide evidence based on the analysis of data from the Understanding Society COVID-19 survey—an initiative funded by the UK Research and Innovation.

The initiative collected data from a national sample of more than 10,000 people from both before the pandemic and in April, the 'prime time' of the COVID lockdown in the UK.

"As the information was collected from the same people, it provides a very clear and effective comparison of the impact of COVID-19," said Dr. Hu, an expert in the study of how socio-economic, political and institutional developments and cultural changes impact on everyday family and intimate lives.

"The findings show that as the pandemic hits BAME migrants particularly hard, it widens entrenched racial disparities in people's labor market participation and economic well-being. They urge [policy makers](#) to place racial justice at the center of the government's immediate and long-term response to the pandemic.

"As we enter the third decade of the 21st century, the COVID-19 pandemic and the global rise of racism and anti-racism movements are two of the most prominent developments to define people's lives in many countries."

As many countries start to ease and lift lockdown measures, Dr. Hu said it would also be crucial to examine and tackle inequalities in people's long-term economic recovery from the pandemic.
