

# Scientists call for broader use of faster COVID tests

August 6 2020, by Robin Foster and E.j. Mundell, Healthday Reporters

---

(HealthDay)—As coronavirus cases continue to surge across America,

scientists on Wednesday called for widespread adoption of simpler, less accurate tests, as long as they're given often and quickly.

"Even if you miss somebody on Day 1," Omai Garner, director of clinical microbiology in the UCLA Health System, told *The New York Times*. "If you [test](#) them repeatedly, the argument is, you'll catch them the next time around."

The strategy hinges on having an enormous supply of testing kits. But many experts believe more rapid, frequent testing would spot people who need immediate medical care while also identifying those most likely to spread COVID-19, the *Times* reported.

Of the dozens of [coronavirus](#) tests that have been granted emergency use authorization by the U.S. Food and Drug Administration, most rely on complex laboratory procedures, such as PCR, the *Times* reported.

Only a few tests are quick and simple enough to be run in a doctor's office or urgent care clinic, without the need for lab equipment. And these tests are still relatively scarce nationwide, though [government officials](#) say they plan to ramp up production of such tests by the fall, the newspaper said.

"If you had asked me this a couple months ago, I would have said we just need to be doing the PCR tests," Susan Butler-Wu, a clinical microbiologist at the University of Southern California, told the *Times*. "But we are so far gone in this country. It is a catastrophe. It's kitchen sink time, even if the tests are imperfect."

The governors from seven states have already taken testing matters into their own hands, banding together to shorten turnaround time for COVID-19 test results.

Three Republican governors and three Democratic governors signed an interstate testing agreement on Tuesday, the *Times* reported. Louisiana, Maryland, Massachusetts, Michigan, Ohio and Virginia will work with the Rockefeller Foundation and two U.S. manufacturers of rapid tests to buy 3 million tests, the newspaper said.

A seventh state, North Carolina, later joined the pact, *CNN* reported.

## **Final stage vaccine trials underway**

On the vaccine front, the final phases of testing for two potential COVID-19 vaccines have been launched.

In one trial, the first of 30,000 volunteers will be given either a vaccine developed by Moderna Inc. and the U.S. National Institutes of Health or a placebo shot, the *Washington Post* reported.

Pharmaceutical giant Pfizer has also announced that it was starting a 30,000-person final phase vaccine trial, to be conducted at 120 sites globally.

Fauci predicted that researchers would probably be able to tell whether the Moderna vaccine was effective by November or December, although he added that it was a "distinct possibility" an answer could come sooner. Pfizer officials have said the company expects to be able to seek regulatory authorization or approval for its vaccine by October, the *Post* reported.

As cases have surged and testing delays have followed, [contact tracing](#) is becoming irrelevant in many parts of the country.

In many cities in Florida, a state which saw its case count pass 500,000 on Wednesday, officials have largely given up on tracking cases, and the

situation is equally grim in California, the *Times* reported.

"I think it's easy to say contact tracing is broken," Carolyn Cannuscio, an expert on the strategy and an associate professor of family medicine and community health at the University of Pennsylvania, told the *Times*. "It is broken because so many parts of our prevention system are broken."

By Thursday, the U.S. coronavirus case count passed 4.8 million as the [death toll](#) exceeded 158,000, according to a *Times* tally.

According to the same tally, the top five states in coronavirus cases as of Thursday were: California with over 532,700; Florida with more than 502,700; Texas with over 480,700; New York with nearly 423,000; and New Jersey with more than 185,000.

## **Nations grapple with pandemic**

Elsewhere in the world, the situation remains challenging.

Cases of the coronavirus in France are spiking once again, the *Post* reported. The country recorded its highest daily total of infections since May on Wednesday, with at least 1,695 positive cases reported over 24 hours.

Spain also recorded an uptick in new cases, fueling fears of a second outbreak in Europe likely a result of countries attempting to return to normal life, the *Post* reported.

In Australia, the premier of Victoria has declared a "state of disaster," announcing even stricter lockdown measures, including a nightly curfew and banning virtually all trips outdoors.

"We have to do more, and we have to do more right now," said Premier

Daniel Andrews. "Where you slept last night is where you'll need to stay for the next six weeks."

Things continue to worsen in India. Over the past two days, the country reported more new cases and deaths than the United States and Brazil, a sign that it may soon outpace them, the *Post* reported. On Aug. 4 and 5, India had over 50,000 new cases and more than 800 deaths, while the caseload in the United States remained below 50,000 and less than 700 deaths were reported.

On Thursday, the country passed 1.9 million infections and over 40,600 deaths, a Johns Hopkins tally showed. The surge comes weeks after a national lockdown was lifted, and it's prompted some parts of the country to revert back to stricter social distancing measures.

Brazil is also a hotspot in the coronavirus pandemic, with over 2.8 million confirmed infections by Thursday, according to the Hopkins tally. It has the second-highest number of cases, behind only the United States.

Cases are also spiking wildly in Russia: As of Thursday, that country reported the world's fourth-highest number of COVID-19 cases, at over 870,000, the Hopkins tally showed.

Worldwide, the number of reported infections passed 18.8 million on Thursday, with over 708,000 deaths, according to the Hopkins tally.
