With the coronavirus surging out of control, the nation's top public health agency pleaded with Americans on Thursday not to travel for Thanksgiving and not to spend the holiday with people from outside their household.

The Thanksgiving warning from the Centers for Disease Control and Prevention came as the White House coronavirus task force held a briefing for the first time in months and Vice President Mike Pence concluded it without responding to questions by reporters or urging Americans not to travel.

Other members of the task force—whose media briefings were a daily fixture during the early days of the outbreak—talked about the progress being made in the development of a vaccine.

Health and Human Services Secretary Alex Azar said pharmaceutical companies Pfizer and BioNTech will seek emergency government approval for their coronavirus vaccine on Friday. And infection disease expert Dr. Anthony Fauci sought to reassure the public that the vaccine is safe while still encouraging Americans to wear masks.

The CDC's Thanksgiving warning was some of the firmest guidance yet from the government on curtailing traditional gatherings to fight the outbreak.

The CDC issued the recommendations just one week before Thanksgiving, at a time when diagnosed infections, hospitalizations and deaths are skyrocketing across the country. In many areas, the health care system is being squeezed by a combination of sick patients filling up beds and medical workers falling ill themselves.

The CDC's Dr. Erin Sauber-Schatz cited more than 1 million new cases in the U.S. over the past week as the reason for the new guidance.

"The safest way to celebrate Thanksgiving this year is at home with the people in your household," she said.

If families do decide to include returning college students, military members or others for turkey and stuffing, the CDC is recommending that the hosts take added precautions: Gatherings should be outdoors if possible, with people keeping 6 feet apart and wearing masks and just one person serving the food.

Whether Americans heed the warning is another matter. The deadly comeback by the virus has been blamed in part on pandemic fatigue, or people getting tired of masks and other precautions. And surges were seen last summer after Memorial Day and July Fourth, despite blunt warnings from health authorities.

The United States has had more than 11 million diagnosed infections and over 250,000 deaths from the coronavirus. CDC scientists believe that somewhere around 40% of people who are infected do not have obvious symptoms but can still spread the virus.

CALIFORNIA CURFEW

Democratic Gov. Gavin Newsom on Thursday announced the imposition

of an overnight curfew on most residents as the most populous state tries to head off a virus case surge that officials fears could tax the state's health care system.

What officials called a limited stay-at-home order requires nonessential residents to stay home from 10 p.m. to 5 a.m. starting Saturday. It lasts until Dec. 21 but could be extended. It covers 94% of the state's nearly 40 million residents.

"The virus is spreading at a pace we haven't seen since the start of this pandemic and the next several days and weeks will be critical to stop the surge. We are sounding the alarm," Newsom said in a statement.

Also Thursday, Rhode Island Democratic Gov. Gina Raimondo announced a "two-week pause" with some businesses closures and capacity reduced for restaurants and houses of worship starting Nov. 30. Officials will reevaluate COVID-19 caseloads on Dec. 13 and if they have not eased, she said "a full state lockdown" will follow.

In New Hampshire, Republican Gov. Chris Sununu previously resisted calls for a statewide mask mandate but issued an order requiring face coverings to be worn in public spaces indoors and outdoors.

KEEPING UP WITH NON-COVID-19 CASES

Hospitals are struggling to keep up with non-coronavirus cases ranging from broken bones to heart attacks in states where COVID-19 cases are tying up resources.

In Kansas, rural hospitals are running into difficulty trying to transfer patients to larger hospitals for more advanced care.

"Whether it is regular pneumonia or appendicitis or fractures that need surgery, they have a limited amount of beds in their facilities and they are not taking a lot of these routine cases," said Perry Desbien, a nurse practitioner who works in Smith Center and other rural communities. "They are saying, 'Send them home. Have them follow up in the office. Unless it is life-threatening, we don't want to see them either.'"

Earlier this month, the Mayo Clinic Health System in Wisconsin announced it was suspending elective medical procedures.

Illinois Gov. J.B. Pritzker noted that with COVID-19 patients claiming a quarter of the state's hospital beds, there are fewer resources for heart attack patients, expectant mothers or cancer patients.

"When we let our hospitals get overrun or even close to it, it is all of us suffering," Pritzker said.

SICK HOSPITAL WORKERS

The Mayo Clinic Health System, a Midwest network of hospitals and clinics run by the world-renowned Mayo Clinic, reported that 905 staff members have been diagnosed with COVID-19 in the past two weeks.

Dr. Amy Williams, executive dean of Mayo Clinic Practice, said the vast majority were exposed in the community and not at work.

"It shows how widely spread this is in our communities and how easy it is to get COVID-19 in the communities here in the Midwest," she said.

In Kansas, 178 employees and doctors at a Topeka hospital had active coronavirus cases or were isolated and on leave because of contact with someone who had coronavirus. And the University of Kansas Hospital in Kansas City and nearby clinics had 206 employees, including physicians, nurses and support staff, out as of Tuesday after testing positive. An additional 260 were not at work and quarantining while they awaited test results.

POSITIVITY RATE

The positivity rate—the percentage of tests coming back positive for the virus—has taken on a more prominent role in the nation's response to the crisis in recent days.

New York City shut down in-person classes in the nation's largest school system this week after the positivity rate surpassed 3%. That angered families who believe it is too stringent a standard and question why bars and restaurants can remain open.

The positivity rate has soared to record levels all around the nation. South Dakota, Iowa and Wyoming's rate are all averaging above 50%, and the national average is now 10%.

Health experts caution that there are weaknesses in the positivity data because states calculate the rate differently. But they say the overall trend is not in dispute, and it indicates severe spread and, in many places, insufficient testing.
