

Test change for travellers to UK as virus cases mount

January 8 2021

All travellers to Britain will need pre-departure coronavirus tests, the government said Friday, as it tries to curb spiralling infection rates that are stretching health services to the limit.

Fears are growing about fast-spreading new variants of the virus,

particularly from South Africa, with concerns hospitals could be overwhelmed.

In London, Mayor Sadiq Khan declared a major incident, saying the British capital was "at crisis point" and urgent action was required as beds for COVID patients could run out within weeks.

At the same time, the UK regulator approved US firm Moderna's COVID vaccine—the third to be authorised for use in the country's mass inoculation programme.

The announcement came with Britain under a renewed lockdown to try to cut spiralling [infection rates](#) and deaths blamed on a fast-spreading virus variant.

A total of 1,162 new deaths within 28 days of a positive test were recorded on Thursday—the highest since the first-wave peak in April last year.

Overall, nearly 79,000 people have died and some 2.9 million people have been infected.

Stay-at-home restrictions, which include school closures, are expected to last until at least mid-February.

Health Secretary Matt Hancock said approval for the Moderna jab was a boost to the inoculation drive, which has seen 1.5 million vaccinated since early December and aims to reach 15 million by mid-February.

"This is further great news and another weapon in our arsenal to tame this awful disease," he said.

"Moderna's vaccine will allow us to accelerate our vaccination

programme even further once doses become available from the spring."

Mutation concern

UK health officials and ministers have described the vaccination roll-out as a head-to-head race against the virus and the vaccination programme as the best hope of a return to normality.

The government is pinning its hopes on the use of vaccines, particularly one developed by Oxford University and drugs firm AstraZeneca, to cut rising infection rates.

New strains are said to be 50 to 70 percent more transmissible, and have been blamed for the steep rise in cases, amid fears they may be resistant to vaccines.

But researchers at the University of Texas said on Friday that 20 people who received the Pfizer-BioNTech jab were protected against a key mutation found in both the British and South African strains.

In London, though, Khan said COVID cases were now "out of control" running at more than 1,000 per 100,000 people, putting pressure on the state-run [health services](#) and emergency services.

Just over 7,000 people were in hospital in the capital in the week to Wednesday—up 27 percent on the previous seven days and 35 percent more than during the first wave peak last April.

Khan urged the public to comply with lockdown measures as "if we do not take immediate action now, our NHS could be overwhelmed and more people will die."

Urgent change

Britain's government has faced repeated calls to ensure international travellers to the country presented negative tests.

But it has argued the requirement to quarantine on arrival from high-risk countries was a more effective measure.

From next week travellers to England from abroad, including British nationals, must present a negative test taken within the last 72 hours or risk a fine.

UK Transport Secretary Grant Shapps told Sky News he expected the rule would "be a UK-wide requirement some time next week".

Scotland, Wales and Northern Ireland, which all set their own health and transport policies, backed the move.

"We're doing this now because there are these variants that we are very keen to keep out of the country like the South African variant," he added, saying it made testing "much more urgent".

Direct travel from South Africa to Britain has been suspended temporarily.

International travellers to the UK from countries not on an approved list of "safe" countries will have to quarantine for 10 days as well as provide a COVID test.

John Holland-Kaye, the chief executive of Britain's largest airport, Heathrow, told BBC radio this was a "belt and braces approach" and "very few people will travel with this in place".
