The U.S. stood Sunday at the brink of a once-unthinkable tally: 500,000

people lost to the coronavirus.

A year into the pandemic, the running total of lives lost was about 498,000—roughly the population of Kansas City, Missouri, and just shy of the size of Atlanta. The figure compiled by Johns Hopkins University surpasses the number of people who died in 2019 of chronic lower respiratory diseases, stroke, Alzheimer's, flu and pneumonia combined.

"It's nothing like we have ever been through in the last 102 years, since the 1918 influenza pandemic," the nation's top infectious disease expert, Dr. Anthony Fauci, said on CNN's "State of the Union."

The U.S. virus death toll reached 400,000 on Jan. 19 in the waning hours in office for President Donald Trump, whose handling of the crisis was judged by public health experts to be a singular failure.

The nation could pass this next grim milestone on Monday. President Joe Biden will mark the U.S. crossing 500,000 lives lost from COVID-19 with a moment of silence and candle lighting ceremony at the White House.

Biden will deliver remarks at sunset to honor the dead, the White House said. He's expected to be joined by first lady Jill Biden and Vice President Kamala Harris and her husband, Doug Emhoff.

The first known deaths from the virus in the U.S. happened in early February 2020, both of them in Santa Clara County, California. It took four months to reach the first 100,000 dead. The toll hit 200,000 deaths in [September](#) and 300,000 in December. Then it took just over a month to go from 300,000 to 400,000 and about two months to climb from 400,000 to the brink of 500,000.

Joyce Willis of Las Vegas is among the countless Americans who lost [family members](#) during the pandemic. Her husband, Anthony Willis, died Dec. 28, followed by her mother-in-law in early January.

There were anxious calls from the ICU when her husband was hospitalized. She was unable to see him before he died because she, too, had the virus and could not visit.

"They are gone. Your loved one is gone, but you are still alive," Willis said. "It's like you still have to get up every morning. You have to take care of your kids and make a living. There is no way around it. You just have to move on."

Then came a nightmare scenario of caring for her father-in-law while dealing with grief, arranging funerals, paying bills, helping her children navigate online school and figuring out how to go back to work as an [occupational therapist](#).

Her father-in-law, a Vietnam vet, also contracted the virus. He also suffered from respiratory issues and died on Feb. 8. The family isn't sure if COVID-19 contributed to his death.

Fauci won a \$1 million award from the Israeli Dan David Foundation for "courageously defending science" during the coronavirus pandemic. On Monday, Feb. 15, 2021, the foundation named Fauci, President Joe Biden's chief medical advisor, as the winner of one of three prizes, saying he had earned it over a lifetime of leadership on HIV research and AIDS relief, as well as his advocacy for the vaccines against COVID-19. "Some days I feel OK and other days I feel like I'm strong and I can do this," she said. "And then other days it just hits me. My whole world is turned upside-down."

The global death toll was approaching 2.5 million, according to Johns Hopkins.

While the count is based on figures supplied by [government agencies](#) around the world, the real death toll is believed to be significantly higher, in part because of inadequate testing and cases inaccurately attributed to other causes early on.

Despite efforts to administer [coronavirus](#) vaccines, a widely cited model by the University of Washington projects the U.S. [death](#) toll will surpass 589,000 by June 1.

"People will be talking about this decades and decades and decades from now," Fauci said on NBC's "Meet The Press."
