

Inflammation protection may be critical to treating multiple sclerosis

March 30 2021, by Will Doss

Sephin1 treatment enhances remyelination after inflammatory demyelination.
(A) Cumulative clinical scores of C57BL/6J female mice immunized with MOG35-55/CFA to induce chronic EAE, treated with vehicle (n = 7) and 8 mg/kg Sephin1 (n = 7) from the peak disease. *p
