Denmark said Monday it would not include the COVID-19 vaccine from US drugmaker Johnson & Johnson in its national vaccination campaign, citing worries over serious side effects involving blood clots.

"The Danish Health Authority has concluded that the benefits of using the COVID-19 vaccine from Johnson & Johnson do not outweigh the

risk of causing the possible adverse effect... in those who receive the vaccine," the authority said in a statement.

"Therefore, the Danish Health Authority will continue the Danish mass vaccination programme against COVID-19 without the COVID-19 vaccine from Johnson & Johnson," it added. The WHO and European medicines watchdog have both authorised the vaccine.
