

# Study: Breast milk found less nutritious due to chemicals

September 20 2021

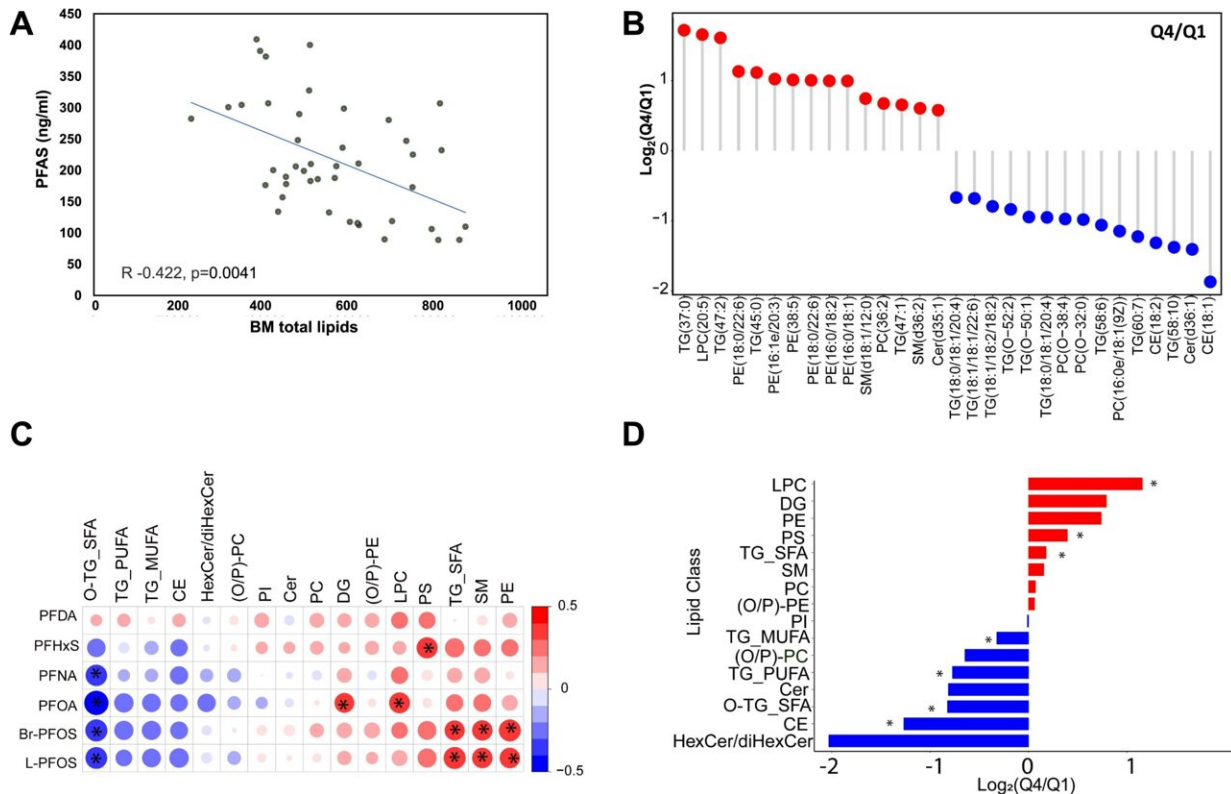

Fig. 1. Impact of PFAS exposure on BM lipid levels. (A) Association of total PFAS and total lipids. (B) Significantly-differing lipids for total PFAS quartile 4 (Q4, high exposure) vs. quartile 1 (Q1, low exposure). (C) Correlation plot of PFAS exposure and BM lipid classes. Positive correlations in red, inverse correlations in blue. Dot size for each pairwise correlation corresponds to the strength of the calculated correlation. (D) Overall difference in lipids classes for total PFAS quartile 4 (Q4, high exposure) vs. quartile 1 (Q1, low exposure). \*p
